Potentilla fruticosa 'Monsidh' PP#10987

FROSTY® POTENTILLA

FULL SUN | HEIGHT 2' | SPREAD 3' | COLORFUL BORDERS | PRUNE EARLY SPRING | HEAT TOLERANT

I like this shrub's beautiful display of large, frost-white, single, rose-like blooms as they add bright spots of color to the summer landscape. This densely branched shrub is very showy in colorful borders, as an accent, or groundcover. Potentillas are fast growing and very tolerant to heat and poor soils. They also have one of the longest blooming times - from June to September. Every second or third year, in early spring, prune all of the stems to just above ground level to maintain an attractive appearance. Apply a 2-3" layer of mulch or organic material to conserve moisture and improve the soil. Thrives in full sun and well-drained soil. Hardy in Zones 3-7.
