I find that this juniper exhibits some of the best silver-blue winter color of the groundcover junipers. Icee Blue® maintains a full, dense mound of foliage, creating a solid groundcover in a short time. This tough evergreen adapts to sandy and rocky soils, and tolerates hot, dry, sunny locations. Ideally planted on slopes, in rock gardens, as a groundcover, in masses, foundations, and containers. Junipers need little pruning if spaced and sited properly. However, you can selectively remove the longest branches, by cutting back to a side branch or main stem, if this creeping juniper gets out of hand. Apply a 2-3" layer of mulch or organic material to conserve moisture and improve the soil. Hardy in Zones 3-9.
