BEST WHEN
UNSHEARED

I am fascinated by the unique, tiered formation this dwarf evergreen displays. The short, blue-green needles and compact foliage may make this one of the finest plants for displaying in the rock garden. It forms a spreading mat of dense branches that radiate from the center and turn a bronze-green in fall. Plant this ground-hugging evergreen along banks and borders. Nana's mounded foliage and form looks best when left unsheared. This moderate grower thrives in moist, well-drained soil in full to partial sun. Apply a 2-3" layer of mulch or organic material to conserve moisture and improve the soil. Hardy in Zones 4-9.
