"Growing Gardeners"

Illustrated by Nevada Myers Wesley

melindamyers.com

Dear Gardening Friend,

I hope you have fun with your new book. Don't worry if you can't fill in all the blanks. Just ask a gardening friend or parent for help. Or make it a game and quiz for family and friends, so everyone can learn something new.

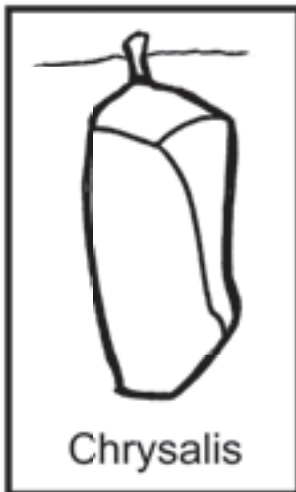

You can also visit my website,
www.melindamyers.com, for more gardening tips
and information.

Now break out your crayons or colored pencils
and get started!

The Life of the

WHO AM I?

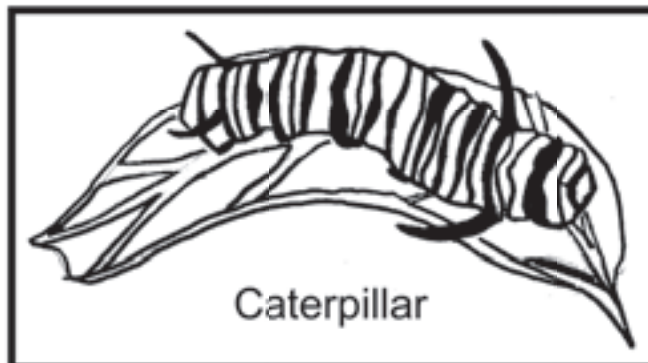

Chrysalis

I start my life as an egg
but I am not a bird.
When I hatch I grow long,
wiggle and squirm.
Then I go undercover
in a little case (chrysalis).
In a few weeks
I make my great escape!

Egg

Connect the dots to
uncover my identity.

Caterpillar

YUM!

Match each of these foods to the
part of the plant you eat

Lettuce

Carrot

Broccoli

Celery

Sunflower

Apple

Leaf

Flower
Bud

Root

seed

stem
(Leaf stem/
petiole)

Fruit

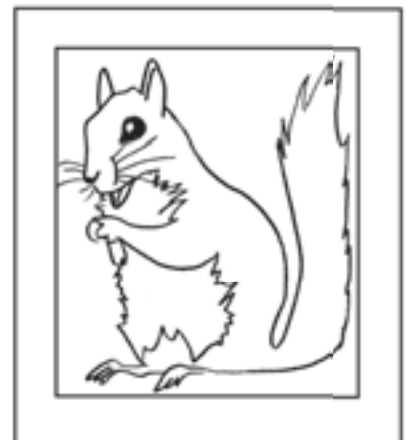

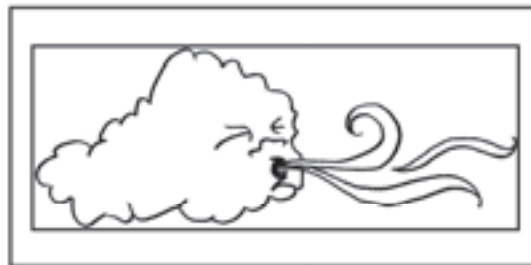

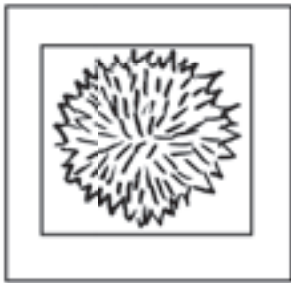

From Seed to Plant

Grow Your Own Giant Sunflower

In the little plastic bag is everything you need to start your own sunflower plant. The brown round disc is called a peat pellet and with some water and your help it will become a temporary home for your sunflower. The striped seed is for planting NOT eating and the plastic bag will hold it all.

Start your sunflower indoors for fun and earlier blooms in the garden. Plant the seed 4 to 6 weeks before you and your family or gardening friends usually plant summer flowers and vegetables outdoors

Planting Your Sunflower

- Place the peat pellet in a shallow bowl of warm water
- Watch it swell into your sunflower seed's new pot
- Find the end of the pot with a small opening - this is the top
- Use a pencil or your finger to make a hole into the peat (through the opening on top)
- Place the sunflower seed in the hole
- Cover the seed with the peat moss
- Set the peat pellet in an empty yogurt cup or other recycled container or the plastic bag, so you don't ruin the furniture
- Place in a warm spot and keep it moist

Help the Little Sunflower Grow

- Move it to a sunny window as soon as you see green
- Water whenever the soil starts to dry

Moving it to the Garden

- After the air and soil are warm, your sunflower can move into the garden
- Put it in a protected place for several days
- Give it just a bit of sun the first day, and then a little more each day for a week - you don't want your sunflower to sunburn
- Then plant it (peat pot and all) in its permanent outdoor home
- Give it lots of room and see how big it grows
- Measure it as it grows and use the chart to write down how big it is growing
